

## About Eogogics Inc

**Eogogics**, pronounced “Eoh-gahjix”, is your global knowledge services partner for training, advisory, consulting, and research-and-development services in areas ranging from high-touch to high-tech. Eogogics principals have been engaged in ground-breaking projects around the world for over 20 years. Our team has individuals with many diverse talents, but they are all tops in their field, love problem-solving, and communicate with clarity and passion. This allows us to offer training and services the way no one else does.

While most of our services are performed business-to-business, some – for instance our public classes, self-study courses, and research publications – are accessible to individuals as well.

**Eogogics clientele** includes organizations, small and large: telecommunications operators, equipment makers, players in the defense and homeland security space, high-tech companies, research laboratories, healthcare organizations, financial services providers, federal and state government agencies, universities, trade associations, nonprofits, and others worldwide

## Eogogics Training Offerings

Eogogics can suitcase its courses, tutorials, workshops, and boot camps to be taught onsite at your own corporate offices, anywhere in the world. Some of our courses can also be taught live from our website (“WebLive™”) via our virtual classroom. All such classes are customized to the client requirements at no additional cost. Recordings of courses previously taught WebLive™ are available 24/7 as e-learning courses (“Now@Web™”). Public seminars and WebLive™ classes, open to individuals, are also sporadically offered.

**What follows is a very brief overview of our training curricula.** For more on any given topic, please refer to our website which provides detailed course outlines for nearly 500 courses.
